

M 8 2

A galaxy 12 million light years from Earth that is undergoing a burst of star formation.

J0617 in IC 443

A neutron star located in a supernova remnant about 5,000 light years away.

CASSIOPEIA A

A supernova remnant believed to be the remains of a massive star that exploded over 300 years ago.

W3 MAIN

A region of massive star formation about 6,000 light years from Earth in the Perseus arm of the Milky Way.

Mz 3

Also known as the Ant Nebula, this newly formed planetary nebula is 3,000 light years away.

**ARCHES, QUINTUPLET,
AND GC STAR CLUSTERS**

Three massive star clusters near the enormous black hole at the center of the Milky Way, about 26,000 light years from Earth.
